

↳ SubQuery ↳

problem 2

Find all students in the engineering table whose cypa is higher than the average cypa the entire department?

sql 2

```
SELECT student-name, cypa
FROM engineering
WHERE cypa > (SELECT avg(cypa)
FROM engineering);
```

problem 2

We have two tables: projects and Interns. We want to find the name of all interns who are currently assigned to "High priority" projects.

sql 2

```
SELECT Intern-name
FROM Interns
WHERE project-ID IN (
    SELECT project-ID
    FROM projects)
```

WHERE priority = 'High priority');

problem :- you want to find the maximum salary from a list of average salaries per department.

SQL :-

```
SELECT MAX(Avg-salary)
FROM (
    SELECT Department, AVG(salary)
    AS Avg-salary
    FROM employees
    GROUP BY Department
) AS Dept-Average;
```

problem :-

Note :-

① USE (=
USE (=) :- Only if you are 100% sure the subquery return exactly one value (a "scalar")

② USE (IN)
USE (IN) :- When the subquery return multiple values (a list).
