

GROUP BY

putting your data into bucket

for instance

A grouping all the employees of the same department into one bucket

like:

HR, Sales, IT etc.

Group BY is typically used with aggregate functions

like: SUM, AVG, COUNT TO calculate things.

ie:

```
SELECT department, AVG(salary)
FROM employees
GROUP BY department;
```

(it result meaningful summary)

* HAVING clause:

Think of IF like filtering After Grouping.

Ques: How many students are in each age group But only display age groups with more than one student?

Solve:

```
SELECT Age, COUNT(Roll_No) AS No-of-Students
FROM Students
GROUP BY Age
HAVING COUNT(Roll_No) > 1;
```
