

CASE

CASE is used to apply conditional logic in SQL. It works like IF-ELSE in programming.

Ques: -- Write a query to add a column in the result that says 'High Earner'
-- if salary is more than 60,000 - otherwise 'Regular'.

Soln: SELECT *,
CASE WHEN salary > 60000 then
'High_Earner'
ELSE 'Regular' END AS
Status
FROM employees;

Ques: ~~we use CASE to evaluate the CGPA column. The WHEN clause acts as a condition and~~

We have a table 'students' with columns Name and CGPA. We want to label students as 'Distinction' if their CGPA is 8.5 or above and 'pass' otherwise.

Solu:

SELECT Name, CYP,

CASE WHEN CYP

7=8.5 THEN

'Distinction'

ELSE 'Pass'

END AS Status

FROM students;

problem:

In a corporate database, we need to classify employees based on their salary

- ① Below 20,000: 'Entry level'
- ② 20,000 to 50,000 (inclusive): 'Mid level'
- ③ Above 50,000: 'Senior level'

Logic:

SELECT employee-ID, salary,

CASE WHEN salary

< 20,000 THEN 'Entry level'

WHEN salary >= 20,000 AND salary <= 50,000
THEN 'Mid level'

ELSE ~~IF~~ 'Senior level'

END AS salary-grade

FROM employees;

problem :- We have a Task Table with a priority column containing 'High', 'medium', and 'low'. A standard alphabetical sort would put 'High', 'medium', 'low'.

the order to be : High $\rightarrow$ medium $\rightarrow$ low

logic :-

```
SELECT Task_name, priority
FROM Task
ORDER BY
CASE
    WHEN priority = 'High' THEN 1
    WHEN priority = 'medium' THEN 2
    WHEN priority = 'low' THEN 3
    ELSE 4
END;
```
